

PROFESSIONAL EXPERIENCE

SOFTWARE DEVELOPMENT EXPERIENCE

Junior Developer — Fincons S.p.A.

10/2021 – 02/2022 | Bari, Italy

- Developed frontend and backend components for web applications using technologies including React, Angular, Node.js, JavaScript and Java.
- Worked with relational and NoSQL databases including Oracle, PostgreSQL and MongoDB.
- Translated software requirements into functional application components and collaborated with developers throughout the development lifecycle.
- Gained experience in debugging, database integration, object-oriented development and team-based software delivery.

Train Manager / Capotreno

Trenitalia S.p.A.

02/2022 – Present | Bari, Italy

- Manage safety-critical railway operations and make real-time decisions during service disruptions and unexpected events.
- Coordinate with passengers, operational teams and railway personnel while maintaining safety, regulatory compliance and service continuity.
- Developed strong ownership, problem-solving and communication skills in a high-responsibility operational environment.

EDUCATION

MSc in Computer Engineering and Automation — Artificial Intelligence Curriculum

eCampus University | Italy

02/2026 – Present | Italy

Relevant areas: Artificial Intelligence, Machine Learning, software engineering and intelligent systems.

BSc in Computer Engineering and Automation

eCampus University | Italy

06/2021 – 10/2025 | Italy

Relevant areas: Software Development, Algorithms and Data Structures, Databases, Computer Networks, Object-Oriented Programming, Automation and Distributed Systems.

Alessandro Scarimbolo

Software Developer |
Computer Engineering
Graduate | MSc Artificial
Intelligence Candidate

PROFESSIONAL SUMMARY

Computer Engineering and Automation graduate and current MSc Artificial Intelligence student with hands-on experience in full-stack software development, databases, IoT systems and software architecture. Experienced with TypeScript, Java, JavaScript, React, Node.js and SQL/NoSQL databases, with a strong foundation in object-oriented programming, data structures and algorithms. Interested in building scalable, reliable software systems and solving complex engineering problems in collaborative environments.

LANGUAGES

English ● ● ● ● ●

Italian ● ● ● ● ●

SKILLS

Programming Languages:

TypeScript, Java, JavaScript, C#, C++

Frontend:

React, Angular, HTML5, CSS, Tailwind CSS

Backend:

Node.js, Express, REST APIs

Databases:

PostgreSQL, Oracle, MongoDB, Firebase

Computer Science:

Data Structures, Algorithms, Object-Oriented Programming, Software Design Principles

Tools & Platforms:

Git, GitHub, Linux, Vite, Netlify

Other:

IoT, ESP32, RESTful architecture, Debugging, Software Development Lifecycle, AI/ML fundamentals

LEADERSHIP & VOLUNTEERING

Scout Leader — AGESCI Bari 14

Lead educational activities and group projects, coordinating teams and developing leadership, communication, conflict-resolution and organizational skills.

CERTIFICATES

Foundational C# with Microsoft

Cambridge English B2

Cisco Networking Academy

Connecting Things

Cisco Networking Academy

Introduction to Internet of Everything

SELECTED PROJECTS

Condominium Management SaaS Platform

TypeScript, React, Vite, REST APIs, Data Modeling

- Currently developing a SaaS platform for condominium management from scratch, focusing on a scalable and strongly typed domain model covering condominiums, units, fiscal years, expenses, payments, and millesimal allocations.
- Designing system architecture and asynchronous service layers for financial calculations, expense distribution, and structured data management.
- Building reusable React components and application workflows using TypeScript and modern frontend practices.
- Establishing a modular architecture to support future backend integration, database design, and full-stack expansion.

IoT Predictive Maintenance System for Industrial Equipment — BSc Thesis

ESP32, MEMS Sensors, ThingsBoard, IoT, Data Monitoring

- Designed an IoT-based predictive maintenance system using ESP32 devices and MEMS vibration sensors.
- Implemented sensor data acquisition and transmission workflows for remote equipment monitoring.
- Used ThingsBoard dashboards to visualize operational data and support condition-based maintenance analysis.
- Explored data-driven approaches to detect abnormal equipment behaviour and reduce downtime risk.

Full-Stack Web Applications & Business Websites

React, Node.js, JavaScript, CMS, Responsive Design

- Developed full-stack web applications integrating frontend interfaces, backend logic, and structured datasets.
- Built responsive business websites and CMS-based solutions based on real client requirements.
- Managed application structure, user experience, deployment, and iterative improvements.
